

Abstract

A sentinel event reduction door comprises a trapezoidally-shaped panel comprising four sides. A continuous hinge is connected to the panel along substantially the full length of a first side thereof. A second side of the panel is adjacent to the first side, wherein the angle defined by the intersection of the first and second sides of the panel is an acute angle. A third side of the panel, the side opposite the side of the panel from the first side, may comprise a pliable material attached thereto.
